

Step A: The palette, as a ColorScheme

```
final scheme = ColorScheme.fromSeed(  
  seedColor: const Color(0xFF0075FB), // BUCKS blue  
  brightness: Brightness.light,  
);
```

Role	Hex	Used For
primary	0xFF0075FB	Main buttons, active navigation, progress elements
onPrimary	0xFFFFFFFF	Text and icons on blue
secondary	0xFFFFED201	BUCKS yellow, highlights, rewards, secondary actions
surface	0xFFFFFFFF	Cards, sheets, dialogs
onSurface	0xFF04204A	Main/body text
error	0xFFEF4444	Validation and destructive actions

Main colors for BUCKS

```
const bucksBlue = Color(0xFF0075FB);  
const bucksNavy = Color(0xFF04204A);  
const bucksYellow = Color(0xFFFFED201);  
const bucksWhite = Color(0xFFFFFFFF);  
const bucksRed = Color(0xFFEF4444);
```

Dark mode: No, for now I'm leaning on light mode only. I decided not to include dark mode for now because implementing and testing an additional color scheme would add development time. I will use the BUCKS light color scheme consistently and focus my time on completing the core features.

Step B: The type scale, as a TextTheme

```
textTheme: TextTheme(  
  headlineSmall: GoogleFonts.poppins(  
    fontSize: 24,  
    fontWeight: FontWeight.bold,  
  ),  
  bodyMedium: GoogleFonts.roboto(  
    fontSize: 16,  
  ),  
  labelSmall: GoogleFonts.roboto(  
    fontSize: 12,  
    color: Colors.grey,  
  ),  
),
```

Your style	Flutter slot	Size	Weight	Used for
Heading	headlineSmall	24px	Bold	screen titles
Body	bodyMedium	16px	Regular	normal text
Caption	labelSmall	12px	Regular	timestamps, hints

By name:

```
Text(  
  'BUCKS',  
  style: Theme.of(context).textTheme.headlineSmall,  
)
```

```
import 'package:google_fonts/google_fonts.dart';
```

pubspec.yaml

```
dependencies:  
  google_fonts: ^6.3.0
```

Step C: Spacing, as constants

```
class AppSpacing {
```

```
static const double xs = 4;
static const double sm = 8;
static const double md = 16;
static const double lg = 24;
}
```

Base unit: 4px

Screen edge padding: 16px

Gap between list items: 8px

Gap between sections: 24px

```
padding: const EdgeInsets.all(AppSpacing.md)
```

Sample between sections:

```
SizeBox(height: AppSpacing.lg)
```

Between list items:

```
SizeBox(height: AppSpacing.sm)
```

Step D: Components, as files

Component	File	Constructor Parameters	Appears on
PrimaryButton	lib/widgets/primary_button.dart	String label, VoidCallback? onPressed	Login, Register, Add Transaction, Budget, Savings Goals
AppTextField	lib/widgets/app_text_field.dart	String label, TextEditingController? controller, String? hintText, TextInputType? keyboardType	Login, Register, Add Transaction, Budget, Savings Goals
SectionHeader	lib/widgets/section_header.dart	String title, VoidCallback? onSeeAll	Home, Reports, Savings Goals, Missions
TransactionCard	lib/widgets/transac	Transaction	Home, Transactions,

	tion_card.dart	transaction, VoidCallback? onTap	Transaction History
BudgetCard	lib/widgets/budget_card.dart	Budget budget, double progress	Home, Budget Planner
SavingsGoalCard	lib/widgets/savings_goal_card.dart	SavingsGoal goal, VoidCallback? onTap	Home, Savings Goals
ProgressCard	lib/widgets/progress_card.dart	String title, double progress, String value	Budget Planner, Savings Goals, Achievements
MissionCard	lib/widgets/mission_card.dart	Mission mission, VoidCallback? onComplete	Home, Daily Missions
AchievementCard	lib/widgets/achievement_card.dart	Achievement achievement, VoidCallback? onTap	Achievements, Profile
BucksCard	lib/widgets/bucks_card.dart	String imagePath, String? message, VoidCallback? onTap	Home, Bucks Companion, Profile
StatCard	lib/widgets/stat_card.dart	String title, String value, IconData icon	Home, Reports, Profile
EmptyState	lib/widgets/empty_state.dart	String message, IconData icon	Transactions, Savings Goals, Budgets
LoadingIndicator	lib/widgets/loading_indicator.dart	String? message	Login, Transactions, Reports, Leaderboard
AppBottomNavigation	lib/widgets/app_bottom_navigation.dart	int currentIndex, ValueChanged<int> onTap	Main app screens

CategoryChip	lib/widgets/category_chip.dart	String label, bool selected, VoidCallback? onTap	Transactions, Reports, Budget Planner
--------------	--------------------------------	--	---------------------------------------

NOTE:

- A component takes data and callbacks, never setState. It renders what it is given and calls back when tapped. That is why MonsterCard gets VoidCallback onTap and not the list itself.
- const wherever the constructor allows it. Free performance, and the linter will keep telling you until you do.

Step E: The theme file, assembled

lib/theme.dart

```
import 'package:flutter/material.dart';
import 'package:google_fonts/google_fonts.dart';

final appTheme = ThemeData(
  useMaterial3: true,

  colorScheme: ColorScheme.fromSeed(
    seedColor: const Color(0xFF0075FB),
    brightness: Brightness.light,
  ).copyWith(
    primary: const Color(0xFF0075FB),
    onPrimary: Colors.white,
    secondary: const Color(0xFFFFED201),
    surface: Colors.white,
    onSurface: const Color(0xFF04204A),
    error: const Color(0xFFEF4444),
  ),

  scaffoldBackgroundColor: Colors.white,

  textTheme: TextTheme(
    // Headings -- Poppins
    headlineSmall: GoogleFonts.poppins(
      fontSize: 24,
      fontWeight: FontWeight.bold,
      color: const Color(0xFF04204A),
    ),

    // Body -- Roboto
    bodyMedium: GoogleFonts.roboto(
```

```
        fontSize: 16,  
        fontWeight: FontWeight.normal,  
        color: const Color(0xFF04204A),  
      ),  
  
      // Captions -- Roboto  
      labelSmall: GoogleFonts.roboto(  
        fontSize: 12,  
        fontWeight: FontWeight.normal,  
        color: Colors.grey,  
      ),  
    ),  
  ),  
  
  cardTheme: const CardThemeData(  
    margin: EdgeInsets.all(8),  
  ),  
  
  filledButtonTheme: FilledButtonThemeData(  
    style: FilledButton.styleFrom(  
      minimumSize: const Size.fromHeight(48),  
      backgroundColor: const Color(0xFF0075FB),  
      foregroundColor: Colors.white,  
      shape: RoundedRectangleBorder(  
        borderRadius: BorderRadius.circular(12),  
      ),  
    ),  
  ),  
),  
  
inputDecorationTheme: InputDecorationTheme(  
  border: OutlineInputBorder(  
    borderRadius: BorderRadius.circular(12),  
  ),  
  contentPadding: const EdgeInsets.symmetric(  
    horizontal: 16,  
    vertical: 14,  
  ),  
),  
);
```

main.dart

```
import 'package:flutter/material.dart';  
import 'theme.dart';  
  
void main() {  
  runApp(const BucksApp());  
}  
  
class BucksApp extends StatelessWidget {
```

```
const BucksApp({super.key});

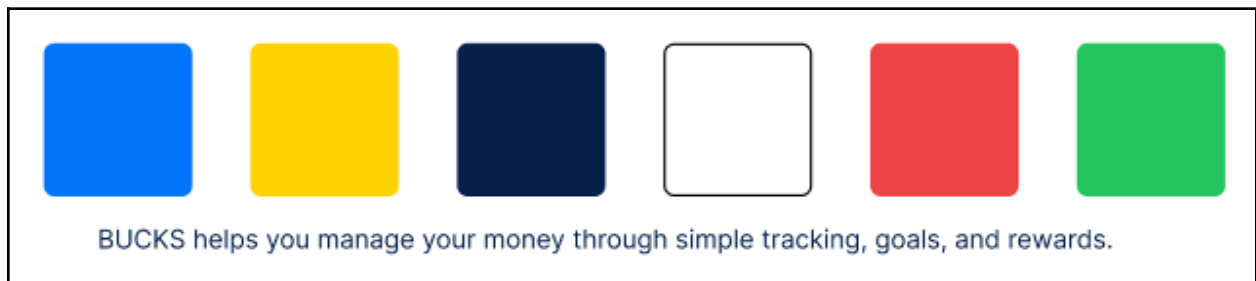

@override
Widget build(BuildContext context) {
  return MaterialApp(
    debugShowCheckedModeBanner: false,
    title: 'BUCKS',
    theme: appTheme,
    home: const Scaffold(
      body: Center(
        child: Text('BUCKS'),
      ),
    ),
  );
}
```

pubspec.yaml

```
dependencies:
  flutter:
    sdk: flutter
  google_fonts: ^6.3.0
```

Assembling the deliverable

Palatte

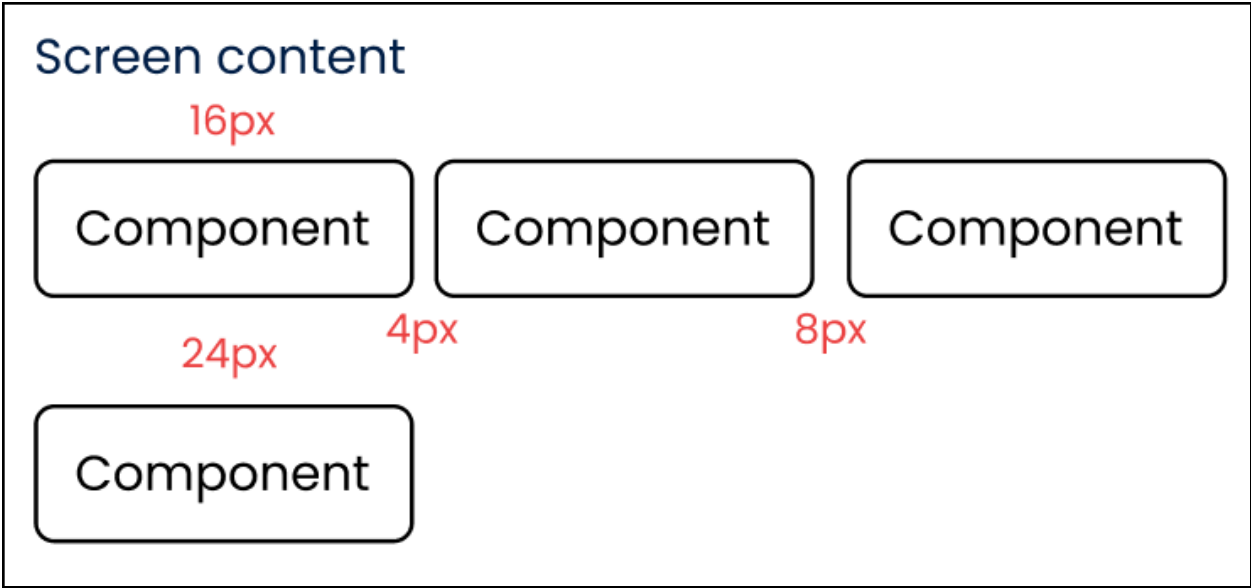

Type Scale

Heading— 24px Bold (Poppins)

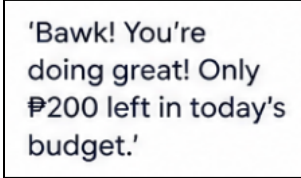

Body — 16px Regular (Roboto)

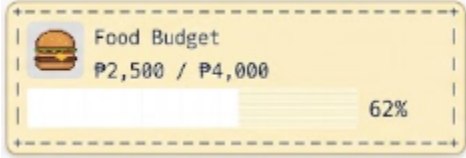

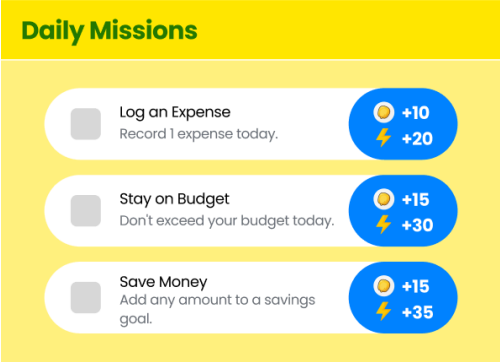

Caption — 12px Regular (Roboto)

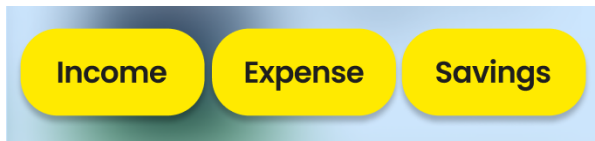

Spacing

Components

 Label: primary_button.dart Parameters: label onPressed Description: Main action button used for important actions.	 File: app_text_field.dart Parameters: label controller hintText keyboardType Description: Reusable input field for forms.
 File: section_header.dart Parameters: title	 File: transaction_card.dart Parameters:

onSeeAll Description: Separates and labels sections on dashboards.	transaction onTap Description: Displays an income or expense transaction.
 File: budget_card.dart Parameters: budget progress Description: Shows budget spending and progress.	 File: mission_card.dart Parameters: mission onComplete Description: Displays daily missions and their rewards.
 File: achievement_card.dart Parameters: achievement onTap Description: Displays unlocked or locked achievements.	 File: bucks_card.dart Parameters: imagePath message onTap Description: Displays Bucks and his contextual reaction/message.

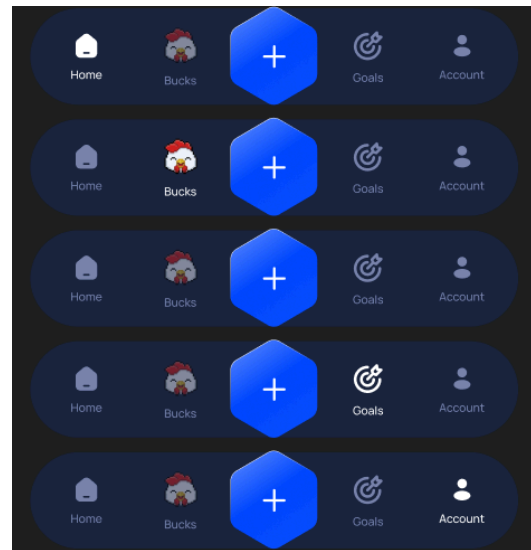

File: category_chip.dart

Parameters:

label
selected
onTap

Description: Allows users to select transaction/budget categories.

File: app_bottom_navigation.dart

Parameters:

currentIndex
onTap

Description: Provides consistent navigation between the main BUCKS sections.

What changed, and why

Element	Prelim said	Now says	Why it changed
Palette	Hand-picked colors	BUCKS blue, yellow, navy, white, error and success colors organized through ColorScheme	I wanted a consistent theme that can be reused across all Flutter screens instead of hardcoding colors.
Typography	Roboto + Poppins	Poppins for headings and Roboto for body/captions	I kept the font combination because it gives BUCKS a clear hierarchy while keeping body text readable.
Dark mode	Light and dark	Light mode only	I removed dark mode

	mode considered		to reduce implementation time and focus on the core BUCKS features.
Spacing	Individual spacing values	4px base spacing system	A consistent spacing system makes the screens easier to build and keeps the UI visually consistent.
Components	Components were mostly planned per screen	Reusable widgets such as TransactionCard, BudgetCard, MissionCard, and PrimaryButton	I want repeated UI pieces to be implemented once and reused across multiple screens.
Navigation	Navigation varied between screens	Shared AppBottomNavigation for the main app	A consistent navigation component makes moving between the core BUCKS sections easier.
Customization	More detailed Bucks customization	Basic outfits/accessories/back grounds for the initial app	I reduced the scope so the feature is realistic to implement within the project timeline.
